

POSAI Kitchen Display System

Changelog

14 April 2026

Summary

335 commits across 13 feature areas. Major milestones: Expo View overhaul, Kitchen Messaging system, Station Mode activation, Portrait layout support, and comprehensive Settings improvements.

Expo View (Expediter Mode)

- Implemented two-tone ticket card headers with order type color coding
- Added allergen badges at both header and individual item levels
- Replaced text 'Send' button with circular runner icon for item dispatch
- Responsive grid layout: dynamically switches between 2 and 3 columns based on viewport
- Restructured item rows: station chip and status icon displayed inline with product name
- Replaced text status labels (Queued, Preparing, Prepared) with compact icons
- Added 'Ready to Send' section in Expo Summary panel
- Implemented status-based blink animations in Expo Summary (amber for ready items)
- Enhanced data flow and performance optimizations for Expo ticket rendering
- Added product-level filtering from Expo Summary panel
- Timer fixes and improved item lifecycle logic
- Added station data to all mock order items for complete station chip coverage

Kitchen Messaging System

- Built Kitchen Messages feature for POS-to-kitchen communication
- Added flash banner notifications for incoming messages
- Implemented floating toast notification system with 4-second auto-dismiss
- Added notification logging to Alerts panel for message history
- Integrated station-aware notification filtering

Station Mode

- Activated station-filtered Home view with dynamic category filtering
- Migrated station chips from static labels to ProductCategory-based system
- Added station navigation hook and callback for sidebar integration
- Filtered Summary panel by active station course
- Renamed 'Prep' mode to 'Station' in Mode Switcher UI
- Renamed footer labels and refined station view styling

Course-Level Aging

- Added course-level aging toggle in Status Colours settings
- Implemented independent status color thresholds per course block
- Applied course-level background color changes based on elapsed time

Servable Modifiers

- Implemented 3-step lifecycle UI for servable modifiers (Queued, Preparing, Done)
- Added eye icon toggle on servable modifier lines
- Fixed icon alignment with modifier text across all card sizes

Recall and History

- Fixed recall visual indicators in History screen
- Added RECALLED badge display on Home screen for recalled tickets
- Restored recalled items to active state on Home view
- Prevented duplicate ticket creation during recall operations
- Merged recall deduplication logic into order store

Mobile Reply System

- Added QR code column in kitchen reply dialog for mobile scanning
- Created /kds-reply mobile route with 10-minute session expiry

Portrait Layout

- Built complete portrait orientation support for tablet devices
- Implemented two-column ticket grid with responsive card sizing
- Added SummaryDrawer component for portrait mode
- Created icon-only footer controls (36px) optimized for portrait

- Polished footer labels and icon alignment across orientations

Navigation and Sidebar

- Renamed 'New Orders' to 'Seen' and added 'Unseen' screen
- Removed 'In Progress' from left navigation (consolidated into main view)
- Implemented Seen/Unseen state sync across screens
- Reordered sidebar navigation items for improved workflow
- Restyled sidebar with glass-morphism effect and restaurant logo

Printer Configuration

- Split printer routing into separate KOT Printer and Label Printer cards
- Added printer assignments hook and React Context state management
- Updated Label Printer card UI and mock data
- Removed chevron arrow from Configure button for cleaner appearance

Sound Settings

- Built new alert sound configuration UI with preset options
- Wired play previews for all sound presets and categories
- Added sound preview for 'Other Alerts' category

Settings and Account

- Added debug mode and support diagnostic cards to Account section
- Implemented simulated log upload with toast feedback
- Removed close (X) buttons from settings sub-screen headers (Language, Aging Rules, Order Type Colors)
- Removed Region UI from Language settings (language-only focus)
- Built Feedback and Support system with grid layout and modals
- Removed 'Report a Bug' option (simplified to Feature Request only)
- Added 150-character limit on Feature Request text input

Cleanup and Removals

- Removed 'Re-route item' and 'Re-route Entire Ticket' flows from Home screen
- Removed Station page component and route (consolidated into Mode Switcher)
- Applied background color refinements (darkened, then set to white)
